In 2015, an estimated 303,000 women died during or immediately following pregnancy and childbirth.

According to the World Health Organization, “The maternal mortality ratio in developing countries in 2015 is 239 per 100,000 live births versus 12 per 100,000 live births in developed countries. There are large disparities between countries, but also within countries, and between women with high and low income and those women living in rural and urban areas.”1

A maternal death is “the death of a woman while pregnant or within 42 days of termination of pregnancy... from any cause related to or aggravated by the pregnancy or its management, but not from accidental or incidental causes.”2 The major complications that account for 75% of maternal deaths are severe bleeding, infection, unsafe abortion, high blood pressure, and prolonged or obstructed labour. Most maternal deaths can be prevented through effective interventions and care during pregnancy and delivery.3

Often seen as a public health concern, the issue of maternal mortality and morbidity must also be understood as a matter of human rights. International human rights treaty bodies have clarified States’ obligations concerning maternal mortality and morbidity and recognized that maternal deaths can amount to violations of women’s rights to life,4 to the highest attainable standard of health, and to equality and non-discrimination.5

Under the Convention on the Elimination of All Forms of Discrimination against Women, “States Parties shall ensure to women appropriate services in connection with pregnancy, confinement and the post-natal period, granting free services where necessary.”6 The Committee on the Rights of the Child has indicated that “lack of access to such services contributes to adolescent girls being the group most at risk of dying or suffering serious or lifelong injuries in pregnancy and childbirth.”7 Thus, States should provide adolescents access to free and confidential sexual and reproductive health services, including maternal care services.8

The Committee on Economic, Social and Cultural Rights has considered that States’ obligations under the Covenant include the obligation to “ensure reproductive, maternal (pre-natal as well as post-natal) and child health care.”9 According to the Committee, “lack of emergency obstetric care services or denial of abortion often leads to maternal mortality and morbidity, which in turn constitutes a violation of the right to life or security, and in certain circumstances can amount to torture or cruel, inhuman or degrading treatment.”10

Reducing maternal mortality and morbidity remains at the center of national and international commitments. At the 1994 International Conference on Population and Development in Cairo and the 1995 Fourth World Conference on Women in Beijing, States recognized the right of women to safe pregnancies. In Sustainable Development Goal (SDG) 3, States have committed to reduce the maternal mortality ratio (from currently 216) to less than 70 per 100,000 live births by 2030.

In 2012, the United Nations High Commissioner for Human Rights developed technical guidance offering concrete advice to States and other stakeholders on what human rights would require at different stages in the policy cycle aimed at reducing maternal mortality and morbidity.11

AT THE REGIONAL LEVEL, RECOGNIZING THE CONTINUED HIGH PREVALENCE OF MATERNAL MORTALITY AND MORBIDITY, THE REVISED MAPUTO PLAN OF ACTION 2016 – 2030, AIMS AT ENDING “preventable maternal, newborn, child and adolescent deaths by expanding contraceptive use, reducing levels of unsafe abortion, ending child marriage, eradicating harmful traditional practices including female genital mutilation and eliminating all forms of violence and discrimination against women and girls and ensuring access of adolescents and youth to SRH by 2030 in all countries in Africa.”

INFORMATION SERIES ON SEXUAL AND REPRODUCTIVE HEALTH AND RIGHTS

KEY ISSUES

1. AN EFFECTIVE AND INTEGRATED HEALTH CARE SYSTEM IS CRUCIAL TO PREVENT MATERNAL DEATHS

A functioning health system requires adequate supplies, equipment, and infrastructure, as well as an efficient system of communication, referral and transport.

Under the right to health, women are entitled to services which reduce maternal mortality and morbidity, including access to skilled attendance at birth, emergency obstetric care, post-partum care, safe abortion services, and other sexual and reproductive health-care services, free from coercion, discrimination or violence.

Humanitarian settings and situations of conflict, post-conflict and disaster, which lead to a breakdown in health systems, significantly hamper progress in maternal mortality reduction. More than half of maternal deaths occur in fragile and humanitarian settings.

The Committee on the Elimination of Discrimination against Women has urged States “to accord priority to the provision of family-planning and sexual and reproductive health information and services, within disaster preparedness and response programmes” and “reduce maternal mortality rates through safe motherhood services, the provision of qualified midwives and prenatal assistance.” The Human Rights Committee, commenting on the right to life, has emphasized that the “State parties should also develop strategic plans for advancing the enjoyment of the right to life, which may comprise measures to ensure access to treatments designed to reduce maternal and infant mortality.”

States are responsible for the actions of private medical institutions.

Regarding the role of private health providers, States “cannot absolve themselves of responsibility in these areas by delegating or transferring these powers to private sector agencies.” In Alyne da Silva Pimentel Teixeira (deceased) v. Brazil, a landmark case on maternal mortality, the Committee on Elimination of Discrimination against Women stressed that the State is directly responsible for the actions of private medical institutions, and that it maintains a duty to regulate and monitor private health-care institutions in line with its due diligence obligations.
2 DISCRIMINATION BASED ON SEX IS AN UNDERLYING FACTOR THAT CONTRIBUTES TO MATERNAL MORTALITY AND MORBIDITY

Discrimination exacerbates pre-existing inequalities which prevent women from accessing the services they require.

Failure to provide services that only women need is a form of discrimination.

When high rates of maternal mortality and morbidity are attributable to government’s failure “to use its available resources to take measures necessary to address the preventable causes of maternal death and ensure availability, accessibility, acceptability and good quality of services,” this is a manifestation of discrimination against women and must be redressed immediately. Persistently high rates of maternal mortality reflects as well a lack of investment in and underprioritization of services required only by women.

Poverty, income inequality and gender discrimination affect women’s enjoyment of their sexual and reproductive health and rights. To address this, the Committee on Economic, Social and Cultural Rights has emphasized that “health facilities, goods and services must be affordable for all,” including for socially disadvantaged groups. States should provide free services to women living in poverty during pregnancy, delivery and postpartum periods.

Restrictive abortion laws lead to higher rates of unsafe abortion, which contributes to maternal mortality.

As unsafe abortion is one of the five major causes of maternal death, part of protecting women’s rights in this area is about ensuring access to safe abortion. This is a manifestation of discrimination against women and must be redressed immediately. Persistently high rates of maternal mortality reflects as well a lack of investment in and underprioritization of services required only by women.

Restrictive abortion laws lead to higher rates of unsafe abortion, which contributes to maternal mortality.

As unsafe abortion is one of the five major causes of maternal death, part of protecting women’s rights in this area is about ensuring access to safe abortion. The Special Rapporteur on extrajudicial, summary or arbitrary executions has considered that maternal deaths resulting from a “deliberate denial of access to life-saving medical care because of an absolute legal ban on abortion” may constitute gender-based arbitrary killings. The Committee on Economic, Social and Cultural Rights has emphasized that “to lower rates of maternal mortality and morbidity requires emergency obstetric care and skilled birth attendance, including in rural and remote areas, and prevention of unsafe abortions.”

3 MARGINALIZED WOMEN ARE AT HIGHER RISK OF VIOLATIONS RELATED TO MATERNAL MORTALITY AND MORBIDITY

Maternal mortality and morbidity disproportionately affects rural women and girls.

In 2016, the Committee on the Elimination of Discrimination against Women highlighted the disproportionately high prevalence of maternal mortality in rural areas, which it attributed to many factors including a lower presence of skilled birth attendants and medical personnel, leading to poor pre- and postnatal care. The Committee also noted a “higher unmet need for family planning services and contraception due to poverty, lack of information and limited availability and accessibility of services. Rural women are also more likely to resort to unsafe abortion than their urban counterparts.”

Certain groups of women and girls are subjected to intersecting forms of discrimination.

The Committee on the Elimination of Discrimination against Women has emphasized the linkages between discrimination on the basis of sex and other factors such as race, ethnicity, religion or belief, health status, age, class, caste, sexual orientation and gender identity. Human rights bodies have recommended that States adopt measures to address maternal mortality and morbidity among marginalized groups, including adolescents, women and girls living in poverty, indigenous women, minority women, and migrant girls.
STATES ARE OBLIGED UNDER INTERNATIONAL HUMAN RIGHTS LAW TO RESPECT, PROTECT AND FULFIL HUMAN RIGHTS IN RELATION TO MATERNAL HEALTH, PREGNANCY AND CHILDBIRTH

RESPECT  The Committee on the Elimination of Discrimination Against Women has observed that “laws that criminalize medical procedures only needed by women and that punish women who undergo those procedures” are a violation of the States’ obligation to refrain from interfering with the enjoyment of women’s right to health. 38

PROTECT States are responsible for exercising due diligence, or acting with a certain standard of care, to ensure that non-governmental actors, including private service providers, insurance and pharmaceutical companies, and manufacturers of health-related goods and equipment, as well as community and family members, comply with human rights standards related to sexual and reproductive health and rights. 39

FULFIL States should adopt legislative, administrative, budgetary, judicial, and other measures to prevent maternal deaths and injury. States’ failure to reduce maternal mortality may breach their obligation to ensure women’s access to health care. 40
